DESCRIPTION*

The PVS-7B/D is the standard issue goggle for U.S. ground forces to conduct night operations. When combined with the latest GEN II or GEN III image intensifier tubes, the PVS-7B/D will perform in the darkest of nights. The unit has a built-in IR Illuminator for no light operations and a high light cut off sensor for protection. The PVS-7B/D Kit, when combined with an image tube, is a complete system that has been ruggedized for harsh environments.

Made to be head/helmet mounted the PVS-7B/D is extremely lightweight adding to user comfort for long missions. Using one hand, the PVS-7B/D can be dismounted quickly. The unit uses two standard AA batteries that will provide at least 40 hours of continuous operation. Optional 3X, 4X and 5X magnifier lenses are available to increase the range of the goggle for long distance observations.
